<b>Cavalier Homes Adelaide &amp; Qualdel Homes Silver Inclusion maybe varied from time to time without notice. Reference Date December 2008</b>			

Cavalier Homes Adelaide and Qualdel Homes highly recommend the “Your Home” website as an independent source of information that contains “a suite of consumer and technical guide materials and tools developed to encourage the design, construction or renovation of homes to be comfortable, healthy and more environmentally sustainable.”

The following excerpt is taken from [www.yourhome.gov.au](http://www.yourhome.gov.au) and tells you how to factor in all the costs associated with building your home. The best way to prepare your budget is to start by comparing inclusions from say three builders. That way you can quickly find out who is going to give you the best “inclusions” deal.

*“When you visit a display home village, the prices displayed are usually base house prices, from which point you can choose additional upgrades and features. It’s often difficult to compare ‘apples with apples’ because what’s offered as a standard inclusion by one home building company may not be offered by another.*

*Many home buyers say they wish they’d known about the hidden costs right from the start. To help with your budgeting, check with your builder about which of the following items are included in the price you’ve been quoted:*

- Council approval
- Construction insurance premiums
- Soil test by a qualified engineer
- Connections to services
- Excavation and drainage
- Driveways and landscaping
- Legally required construction extras (eg. scaffolding, security fencing)
- Lighting
- Floor finishes (e.g. carpet, tiles etc)
- Kitchen cabinets, benchtops, sinks and appliances
- Curtains and blinds

*Make sure the cost of meeting State and Local council regulations ( such as extra insulation, rainwater tanks, etc) has been factored into the quoted price.*

*Take time to think about your budget – this is your chance to lock in features that hold their value and save you money, such as :*

- Quality design that uses space cleverly
- A comfortable home with a high star rating
- Water and energy saving features.

*Many of these features come at no extra cost, and those that do cost more upfront are usually quickly paid for by savings in energy, water and maintenance bills.*

## FREQUENTLY ASKED QUESTIONS

**Are there footings and slab included in the price?** Yes, in all our pricing before an Engineer's Footing Report is available we include allowance for 'S' type soil - 100mm rubble base, raft footings 300x300 with Y24 bars top and bottom, and 100mm slab with F72 mesh. Also allowed is concrete pump hire for a single pour and 2 Engineer's Inspections

**Is it our practice to upsell?**

No, we do not sign a Building Contract until all decisions have been made about fixtures, fittings and finishes. This way you know the total price before the building contract is signed.

**Is it necessary to upgrade your fixtures and fittings to provide a reasonable standard?** No, our price includes quality fixtures and fittings. However if you wish to upgrade your selections, that is your choice, and we will provide pricing for you before you make any final decision and sign a building contract.
